

Found, not staged.

EXEMPLARY FRAME — REAL LIGHT, REAL ROOM, QUIET COMPOSITION

SUBJECT	Evidence of thinking in progress: paper with hand-drawn wireframes, index cards in columns, pinned cards, kraft folders. Closed laptops as often as open ones.
LIGHT	Real light only. Window light, overcast daylight, low late-afternoon rake. Never studio strobes.
COLOUR	Warm neutrals, with exactly one red object in frame and nothing else red.
CAST	Diverse across any set. Name a specific ethnicity per prompt; the model default skews white. Vary body types and ages, not only skin tone.
TEXTURE	Film grain always. Rooms that have been used. Slight imperfections.
SCREENS	Grey placeholder rectangles and at most one red rectangle. No readable interface text; brand text is composited later so it stays editable.

NEVER IN THE PROMPT

studio strobes, softbox, "professional", "premium", modern office, coworking space, glass partitions, "startup vibes", neon, holograms, clean white background, lens flare

BANNED CLICHÉ CONCEPTS

lightbulbs, hourglasses, handshakes, network nodes, glowing brains, rockets, mazes, puzzle pieces, humanoid AI figures, a literal compass held up to the lens

Never name a real publication or person: it is the fastest route to baked-in text and a moderation refusal.

COMPOSITING OVER GENERATION

Generate the surface blank

Ask for an empty screen, sticker, or panel. Naming a logo in the prompt returns garbled pseudo-text and wrong-weight letterforms every time.

Composite the artwork after

Perspective-map the real asset onto the surface. build-composites.py detects the quad and warps the artwork onto it.

Why it matters

The mark stays correctly typeset, the copy stays editable, and the shot can be regenerated when the wordmark or palette changes.
